No Modem is needed for Fiber to the Home customers. An Ethernet (CAT5) wire is connected to your computer through a specially wired jack.

WCCTA.net cannot guarantee that service will be compatible with all computer and network configurations.

WCCTA.net cannot guarantee access speeds of High Speed Internet Service due to factors not limited to; line condition and or distance from Webster-Calhoun Cooperative Telephone Association equipment.

Plans and pricing are subject to change without notice.

Customer Premise Recommendations:

Computer Protection: As with any Internet connection, WCCTA.net recommends that you protect yourself from computer viruses and spyware. There are a variety of software programs available; however, they should be updated regularly.

Surge Protection: WCCTA.net recommends all customers use quality surge protection or UPS, uninterrupted power supply, that will protect your phones lines as well as multiple AC power protected outlets to protect your computer equipment. Make sure there are at least two spaces available on your current surge protector.

Firewall/Gateway: Because this Internet access provides an “always on” connection to the Internet, if your PC is powered on continually, WCCTA.net recommends the use of a fire wall or gateway. A fire wall is a special software portion of your Internet connection that lets only certain kinds of messages in and out. *MULTIPLE PC USERS must have a gateway/firewall installed with a hub.*
